The Rest of the world (ROW) is benefitting from lower cost of capital due to China exporting deflation by diverting exports from the USA to the ROW, lower inflation, but rising competition from imports putting jobs and currencies under pressure. Since the USA election in November 2024, Chinese exports to US declined by 24.9% but increased in Asia, Europe and ROW by 13.0%, 8.9% and 7.1% respectively. All of this is playing out in the currency market, with the US\$ index weakening by 9.9% in the first 9 months of the year, with the Euro up 12.2%, Sterling up 7.0% and commodity currencies like the Rand (up 8.6%) strengthening. The stronger currencies are assisting in lowering import inflation and boosting US\$ returns for investors. The Global economic risks remain high as 1) the long term impact of Tariffs remain unclear, 2) government debt is expanding rapidly, 3) deteriorating demographics in many countries, 4) unstable governments, 5) geopolitical uncertainty, 6) high inflation and 7) slow economic growth. The economies that are able to navigate through this period will prosper.

Source: IMF, World Economic Outlook, July 2025

The Global Economy has remained resilient in the short term, despite the rising risks, due to the massive fiscal stimulus, funded by large budget deficits and high and rising debt and declining interest rates. The US with a fiscal deficit of 6.3% and Government debt of 122% of GDP, has further expanded fiscal support for the economy with the Big Beautiful Bill with massive tax incentives and an interventionist economic policy to expand the USA production capacity. Europe with its ageing demographic is not able to afford its welfare spending and too politically weak to reform policies to more affordable levels. Inflation in the USA and Europe is resilient due to high service inflation as a result of labour shortages and slowly rising goods inflation which will gain upward momentum as Tariffs impact prices. The medium term outlook for these regions are rising cost of capital (US government debt cost is 18.3% of government revenue) reducing the ability to spend on the productive side of the economy, high inflation, no economic reform (in Europe), resulting in slow economic growth and rising risks.

The global property sector was boosted by a very robust European Reit sector, with performance boosted by low valuations (after 10 years of underperformance), lower European interest rates and the stronger Euro and Pound. The Oasis Crescent Global Property Fund (OCGPEF), £ class, was awarded the prestigious LSEG Lipper award for the best performing fund over a 3-year period. The fund had US\$ returns of 10.7% for the year to date September 2025. OCGPEF has a portfolio of high-quality Reits, with positive demand / supply fundamentals in secular growth sectors, with superior balance sheets with excellent management. The fund is well positioned with 10% cash/near cash holding to add value over the long term.
