Investment Manager Commentary

Post the national elections, the ANC has lost its majority and a Government of National Unity has been formed. The checks and balances of a multi-party government, together with the continuation and broadening of the reform process started in the 6th Administration and combined with the peaceful transition, has boosted local and global confidence in South Africa. The economy is also benefitting from declining inflation, stronger exchange rate, electricity availability increasing, operational improvement at Transnet and the increasing chance and magnitude of interest rate cuts. The outlook for the South African economy is improving and there is potential for a meaningful step up in the growth rate following the recent years of stagnation due to the Eskom and Transnet impact. Electricity load shedding peaked in Q2 2023 at an average load shedding stage level of 3.6 which reduced to 1.6 by Q4 2023 and in Q2 2024 South Africa experienced no loadshedding with Eskom exceeding 100 days without load shedding.

	Average Loadshedding by Stage	% Change (Year on Year)
Q1 2023	2.9	1519
Q2 2023	3.6	210
Q3 2023	3.0	89
Q4 2023	1.6	-40
Q1 2024	1.5	-47
Q2 2024	0.0	-100

Over the next year we would anticipate industry players and rating agencies to upgrade economic growth and the sovereign rating of South Africa.

With declining inflation and the positive sentiment post Election we have started to see net foreign purchases turning positive and this has resulted in SA Income performing strongly over Q2 2024. SA bonds continue to provide some of the highest real value amongst peers and remains attractive. We remain focused on investing in high quality issuers with strong and sustainable cash flows.

Risk and Reward Profile

The risk and reward indicator:

- The above risk number is based on the rate at which the value of the Fund has moved up and down in the past
- The above indicator is based on historical data and may not be a reliable indication of the risk profile of the Fund
- The risk and reward category shown is not guaranteed and may shift over time
- The lowest category does not mean 'risk free'.

The Fund may also be exposed to risks which the risk number does not adequately capture. These may include:

- The value of stock market investments, and the income from them, will fluctuate. This will cause the Fund price to fall as well as rise and you may not get back the original amount you invested
- Any investment in international companies means that currency exchange rate fluctuations will have an impact on the Fund
- The Fund invests in a variety of geographic regions and countries. It is therefore exposed to the market sentiment of that specific geographic region or country. This level of diversification is appropriate to deliver on our objective to generate real returns at a lower volatility for our clients over the long term.
